

Sales Performance Analysis Report

Project Overview

This report analyzes sales performance data to understand the company's overall business performance, sales trends, customer behavior, product performance, geographic distribution, and shipping operations.

The analysis is based on historical order data covering sales transactions from 2015 to 2018.

The main objective of this analysis is to identify:

- Overall business performance
- Top-performing products and categories
- High-value customers
- Geographic sales patterns
- Sales trends and seasonality
- Shipping and delivery performance
- Actionable business opportunities

Executive Summary

The business generated total sales of **\$2,261,536.78** from **4,922** orders and served **793** unique customers.

The strongest sales performance came from the **Technology** category and the **West** region. Sales also showed strong growth after 2016, with 2017 and 2018 experiencing significant year-over-year growth.

The analysis also identified opportunities to improve customer retention, manage slow-moving products, reduce seasonal sales dips, and investigate delivery performance in the Central region.

Key Metrics

Metric	Value
Total Sales	\$2,261,536.78
Total Orders	4,922
Unique Customers	793
Unique Products	1,861
Average Delivery Time	4.0 days
Top Category	Technology
Top Region	West
Most Used Shipping Mode	Standard Class

1. Business Performance

The overall business performance was evaluated using total sales, total orders, unique customers, and unique products.

The business generated its highest annual sales in **2018**, with total sales of **\$722,052.02**.

Sales declined by **4.26%** in 2016 but recovered strongly in the following years, growing by **30.64%** in 2017 and **20.30%** in 2018.

Sales Trend

YEARLY SALES GROWTH TREND

Total Revenue (2015 - 2018): \$2,261,537

2. Sales by Category

Technology was the strongest-performing category, contributing **36.59%** of total revenue.

This indicates strong demand for technology-related products and suggests that inventory planning and marketing efforts should continue to support this category.

SALES BY CATEGORY

Highest Generating Category: Technology (\$827,456)

3. Sales by Region

The West region generated the highest sales, with total revenue of **\$710,219**.

This makes the West region the strongest geographic market in the dataset. The business should continue monitoring demand in this region and ensure sufficient product availability.

SALES BY REGION

Top Performing Region: West (\$710,220)

Top States

TOP 10 STATES BY REVENUE

Leading Market: California (\$446,306)

Top Cities

4. Customer Analysis

Customer analysis was performed to understand high-value customers, customer segments, and repeat purchasing behavior.

The top 10 customers contributed **6.80%** of total sales, indicating that a small group of customers represents a meaningful share of total revenue.

Only **1.64%** of customers placed only one order, highlighting an opportunity to improve customer retention and encourage repeat purchases.

One-Time Customers

5. Product Analysis

The top-selling product by sales was **Canon imageCLASS 2200 Advanced Copier**.

The **Technology** category was the strongest-performing category, while **Phones** was the top-performing sub-category within Technology.

The analysis also identified **94 products** that were ordered only once, indicating limited demand for these products.

Category and Sub-Category Performance

6. Time Trend Analysis

Sales performance varied significantly across years and months.

The best-performing year was **2018**, generating **\$722,052.02** in sales.

The strongest months were **November** and **December**, while **January** and **February** consistently showed the weakest performance.

This indicates a seasonal pattern in the business, with stronger demand toward the end of the year.

Monthly Sales Trend

7. Shipping Analysis

Standard Class was the most commonly used shipping mode, accounting for **59.79%** of all orders.

The overall average delivery time was **3.96 days**.

The Central region had the highest average delivery time at **4.07 days**, compared with the overall average of **3.96 days**.

This difference is relatively small, but the Central region should still be monitored for potential logistics inefficiencies.

Final Business Recommendations

1. Focus Marketing on Top Region

Finding: West region generates \$710,219 in sales, the highest among all regions.

Recommendation: Increase marketing budget allocation and inventory availability in the West region to capitalize on existing strong demand.

2. Strengthen the Leading Product Category

Finding: Technology contributes 36.59% of total revenue.

Recommendation: Prioritize supplier relationships and stock levels for Technology products, and explore expanding the product range within this category.

3. Retain High-Value Customers

Finding: Top 10 customers contribute 6.80% of total sales.

Recommendation: Launch a loyalty/rewards program targeting these high-value customers to protect this critical revenue base.

4. Convert One-Time Buyers

Finding: 1.64% of customers ordered only once.

Recommendation: Implement post-purchase email campaigns or first-time buyer discounts to encourage repeat purchases.

5. Address Weak Product Performance

Finding: 94 products were ordered only once or generated minimal sales.

Recommendation: Consider bundling slow-moving products with bestsellers, running clearance promotions, or discontinuing consistently underperforming SKUs after further investigation.

6. Smooth Out Seasonal Revenue Dips

Finding: Sales consistently perform weakest in January and February .

Recommendation: Run targeted seasonal promotions or discounts during these low-performing months to stabilize monthly revenue.

7. Investigate Slow Shipping in Specific Region

Finding: Central has the highest average delivery time at 4.07 days , compared to the overall average of 3.96 days .

Recommendation: Review fulfillment and logistics processes for the Central region to identify potential bottlenecks and improve delivery speed.

8. Promote Faster Shipping Options

Finding: 59.79% of orders use Standard Class , which also has the slowest average delivery time.

Recommendation: Highlight faster shipping options at checkout, potentially with small incentives, to give customers more delivery choices and improve the overall customer experience.

9. Leverage High-Performing Sub-Categories

Finding: Phones is the top performer within Technology .

Recommendation: Feature the Phones sub-category prominently in marketing campaigns and consider cross-selling related products.

10. Improve Product Portfolio Decisions

Finding: 94 products were ordered only once, indicating limited demand for these products.

Recommendation: Review the performance of rarely ordered products and consider bundling them with popular products, offering clearance promotions, or reducing future inventory investment in consistently underperforming items.

Conclusion

This analysis provided a comprehensive overview of the business's sales performance, customers, products, geographic markets, time trends, and shipping operations.

The analysis identified strong performance in the Technology category and West region, significant seasonal patterns in sales, valuable high-spending customers, slow-moving products, and potential opportunities to improve customer retention and shipping operations.

The findings and recommendations in this report can help support better decisions related to marketing, inventory management, customer retention, product planning, seasonal promotions, and logistics.
